

# bluePRINT Link™ Module Allows Access to a Variety of Vehicle Data Parameters!

When used with the bluePRINT central controller, the bluePRINT Link module allows access to a variety of the vehicle's data parameters.

By incorporating the bluePRINT Link module into the vehicle, the need to splice into discrete wire triggers can be greatly reduced. Not only does this reduce the time required to install a bluePRINT system into a vehicle, it also increases system reliability due to issues when wiring into discrete triggers.

The bluePRINT Link also provides access to vehicle parameters that may not have been available via discrete wires, such as engine coolant temperature, engine RPM, and throttle pedal position, to name a few. Just like the discrete wires, the vehicle parameters can be mapped as input triggers to automate the control of vehicle lighting.

Contact your sales representative for further details.

## Chevrolet

Model	Year	Product Number
Express and GMC Savana Vans	2008-2017	ENGLNK004
Silverado and Sierra Pickup Trucks	2014-2017
